

Event Promotion Page: Use Case

10/29/2016

Iceland Airwaves 2016

- Open Events promotion page
- Enable voiceover: COMMAND + OPTION + F5
- Click "Use Voiceover"
- Voiceover immediately starts reading top content
 - Safari, Iceland Airwaves, window, heading level 1, Iceland Airwaves 2016
- Read all content on page
 - Control + Option + A
- After letting voiceover read the whole page I noticed some things
 - For one of the headers, it doesn't read it out, it spells it. It's only for that one header though, it reads the others just fine.
 - Got to find a way for it to read the prices
 - Like how it reads the list
- There's only two links
 - Pop up link list = CONTROL + OPTION + U
 - Might need to change the link "here" to "Buy your tickets here" to make it easier to understand
 - On the list, click ENTER/RETURN key to go to link
- Want to go to one of the links (if not on the list of links window)
 - CONTROL + OPTION + Space Bar

To stop voiceover from reading: CONTROL

To get out of voiceover: OPTION + COMMAND + F5

Conclusion: Seems pretty simple and easy, especially there's not much content on the page. Will try to fix the links and other little issues...

UPDATE

Fixed the header "The Line-Up" to "The Lineup" and that fixed it. The Voiceover read it.

Link changed to "Buy your tickets here" → easier to understand content

Don't know what to do with the prices but it will do for now.
